

Change To Feature Migration App:

Supporting ChaRM customers on
the way to SAP Cloud ALM

Our process is
complex
Features are not
flexible enough

We miss all the
customization options

We have different
change types with
specific status flow

Are import checks
reliable enough

We need reliable
reporting, but we miss
relevant data

Approval patterns and
corresponding roles
are missing

Some customer's concerns about Change & Deployment with SAP Cloud ALM

How to deal with those concerns?

Understand customer
processes

Redesign and
simplify!

Build extensions if
needed

Start with PoC

Stop!
We cannot move to Cloud
ALM right now we still
have running cycles and
open changes!
